Abstract	v
Acknowledgements	vi
1 INTRODUCTION	1
1.1 Structure of the book	2
2 GIS AS THE TECHNOLOGICAL BACKGROUND FOR THE STUDY OF A CITY	4
2.1 Archaeology and quantitative analyses	4
2.2 GIS in archaeology and archaeological resource management	6
2.2.1 Database management	6
2.2.2 Spatial analysis – Generating new information	7
2.2.3 Predictive modelling	8
2.3 GIS in urban archaeology: Applications and implications	9
2.3.1 GIS on the ‘site’ scale	10
2.3.2 GIS on the ‘city’ scale	11
2.4 Conclusion	13
3 URBAN PLANNING AND URBAN ARCHAEOLOGY	14
3.1 Theoretical framework	14
3.2 Management of the underlying archaeological resources in the city: Questions and tools	16
3.2.1 New uses for known methods (landscape archaeology)	16
3.2.2 Ground disturbance as a source of information	17
3.2.3 Interdisciplinary collaboration and opening up to society	17
3.3 Expected outcomes	18
3.4 Conclusion	18
4 MODEL CONSTRUCTION	19
4.1 Methodology	19
4.2 Patras as a case study	20
4.2.1 Interviewing the experts	23
4.3 The data	24
4.3.1 Data collecting - Limitations	24
4.3.2 Data digitisation	25
4.3.3 Tools of Spatial Analysis	25
4.3.4 Tools of Statistics	28
5 APPLICATION AND RESULTS	30
5.1 Testing the distribution of the sample	30
5.2 Predictive modelling of archaeological potential	31
5.2.1 Thiessen Polygons	31
5.2.2 Further statistical and spatial analysis	33
5.2.3 Results and Discussion	35
5.2.4 Conclusion	37
5.3 Interpolation	37
5.3.1 Spatial and geostatistical analysis	37
5.3.2 Results	40
5.3.3 Conclusion	43
5.4 Archaeological excavations and the building regulations of the city	43
5.4.1 Classification of the building regulations into groups and the calculation of the surface of the City Plan	44
5.4.2 Distribution of the excavations	46
5.4.3 Distribution of the archaeological excavations	46
5.4.4 Distribution of chronological periods	47
5.4.5 Distribution of typology	48

5.4.6 Distribution of the preservation status of the excavated sites	49
5.4.7 Distribution of potential archaeological surface	50
5.4.8 Distribution of intended excavation depths	50
5.4.9 Distribution of maximum known depth without archaeological deposits	51
5.4.10 Conclusion	52
6 GENERAL CONCLUSION AND FUTURE PROSPECTS	53
6.1 Results, Discussion and a New Building Regulation	53
6.2 GIS in the city: Practical Applications & Future Research	55
